**Task # 18:**

## Develop a Countdown Timer Using HTML, CSS, and JavaScript

Objective:

Create a countdown timer that displays the remaining time until a specified event.

Requirements:

- Design an HTML structure to hold the countdown timer elements.

- Style the countdown timer using CSS to enhance its visual presentation.

- Implement JavaScript functionality to calculate and display the remaining time dynamically.

- Allow users to specify the target date and time for the countdown timer.

- Ensure the countdown timer accurately reflects the time remaining, updating in real-time.

- Test and ensure compatibility with various web browsers and devices for consistent functionality and appearance.
