Task # 20:

Custom Modal Window Using Pure JavaScript

Objective:

Create a custom modal window with a header, body, and close button using only

JavaScript.

Requirements:

- Develop a modal window with the following components:

- Header: Display a title for the modal window.

- Body: Provide space for content within the modal window.

- Close Button: Implement a close button to allow users to close the modal.

- Ensure the modal window is displayed when triggered. Enable users to close

    the modal window by clicking the close button or anywhere outside the modal.

    Ensure compatibility with different browsers and devices
